DETAILED ACTION

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: there is no basis in the specification for “fan frame”, the PCB being “aligned with the preset hole”, and “manual fan speed control interface”.

Claim Rejections - 35 USC § 112

Claims 2 to 4 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: there is no structural relationship between the fan frame and the stator frame.

Claims 2 to 4 are also rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites a “fan frame”. However, no fan is recited in combination with the frame to give meaning to this expression.

Claim 4 recites a “stator frame”. However, no stator is recited in combination with the frame to give meaning to this expression. Also, any stationary structure is readable as a “stator”. The claim should recite that the stator is part of the electric motor driving the fan.

In claim 4, it is not clear in what manner the PCB is aligned with the preset hole. That is, there is no reference frame which would define the alignment. Applicant may consider reciting that the PCB overlaps the preset hole.

Claim Rejections - 35 USC § 103

Claims 2 to 4, as understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Su ‘675 in view of Dob ‘012. Su discloses a fan having a fan frame (see figure 3) and a stator frame 1. Any stationary structure is readable as a stator frame. The speed of the fan is controlled by adjusting stepless knob 112. The fan is disclosed for use with a computer case. However, Su does not disclose a PCB which is aligned with the preset hole of the adjusting knob. Dob discloses a fan which is controlled by an adjusting knob 36 located in a preset hole. The preset hole is aligned with PCB 35. This forms a more compact structure compared to having the PCB located remotely from the preset hole. In view of this teaching, it would have been obvious to provide the cooling fan of Su with a PCB which is aligned with the preset hole.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
